

EUROPA -

Large format cutting systems

Accessories/consumables:-

- 4170 Utility blades (100's)
- 4171 Textile blades (10's)
- 4172 Acrylic scoring blades (10's)
- 4180 EUROPA Elevator set
- 4061-69 EUROPA Table mounts
- 4091-99 EUROPA Tables

Elevators

Table

Ideal for cutting:-

- Acrylic (score and snap)
- Cardboard
- Corrugated plastic
- Foamboard
- Polystyrene
- PVC foamboard
- Banner
- Fabric/textiles
- Film
- Paper
- Self adhesive vinyl
- Magnetic sheet

Made in the UK

Europa, Trimalco's large format cutting system comprises a number of interacting products which together offer a high degree of performance and accuracy at a price unmatched by any other.

The cutting head, which is common to all Trimalco cutter rails, includes a magnetic blade magazine which accepts standard utility blades and standard scoring blades. A 45mm textile cutting wheel and holder is included as standard.

Europa Cutter Rails - A choice of two cutter rails, in various sizes, is available. The unique lightweight, single extrusion design of the **Europa** offers an inbuilt rigidity which allows the cutter to span widths in excess of 5m. The **Europa Pro**, which outwardly looks identical, is made from two extrusions factory adjusted for increased accuracy.

Europa Elevators - Adding a pair of elevators will allow you to raise and lower either cutter bar making it possible to align and cut the largest work singlehanded.

Europa Table Mount - This extruded aluminium base incorporates a narrow groove to accept the blade tip, a full length silicone insert to aid clamping and an

accurate metric/imperial measuring scale. The **Europa Table mount** can be fitted to your own table or to our **Europa Table**. The mounting system allows the base extrusion to be adjusted for straightness and flatness.

Europa Table - There are many proprietary modular aluminium table systems available but they are expensive and lack the strength and rigidity required in a product fit for this purpose. The aluminium extrusions used in the Europa Table have been designed to optimise the strength-to-weight relationship resulting in a system which is significantly lower in cost than all other aluminium profile systems.
